Referral letter for Bingjing Gu

To whomever it may concern,

I have worked with Bingjing when he was a Data Scientist intern with Data Innovation lab of Amsterdam Airport Schiphol. We collaborated on a project where Bingjing was tasked to develop a predictive model for our Bird Control team.

After he was presented with the problem Bingjing took ownership and worked independently, presenting results to the lab members and our customers at the Bird Control. His deep knowledge of statistical learning was a valuable welcome asset for the project and helped him to translate the business problem into a specific machine learning problem and finally propose a solution for it.

The technologies Bingjing used in our lab were R, Python, Jupyter, Spark and H2O. At the start of the project Bingjing was only proficient with R. However he was able to quickly and independently pick up Python, Spark and H2O. The dataset he worked on was approximately 200GB geocoded time series.

I believe Bingjing is a strong problem solver with good command of several technologies and deep theoretical understanding of data. I believe he would make a great addition to your data science team. If I can answer any further questions, please contact me.

Regards,

Rok Mihevc
